

7. The 2002 List of Impaired Surface Waters [303(d) List] and Integrated Assessment of Water Quality in Maryland

What follows is the 2002 Integrated 303(d) List sorted by attainment status or part of the List upon which a water body is placed. Five parts are used in the current list (parts 3, 4a, 4b, 5 and 6). Section 7.1 reports surface waters listed on Part-3 of the list and includes waters having insufficient data or information to determine whether any water quality standard is being attained. Section 7.2 reports surface waters listed on Part-4a of the Integrated List and includes surface waters that are still impaired but have a TMDL that has been completed or submitted to EPA. Section 7.3 reports surface waters listed on Part-4b of the Integrated List. This includes surface waters impaired for one or more water quality standards but not needing a TMDL because other pollution control requirements are reasonably expected to result in the attainment of water quality standards in the near future. Section 7.4 reports surface waters listed on Part-5 of the Integrated List and is the section of the list that has been historically known as the 303(d) List. Part-5 of the list includes water bodies that may require a TMDL. And lastly, Section 7.5 reports surface waters listed on Part-6 of the Integrated List and includes surface waters that have been de-listed or removed from the List of impaired surface waters.
